Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 15, 2007 has been entered.

Election/Restrictions

This application is in condition for allowance except for the presence of claims 1-11 and 27-50 directed to an invention non-elected without traverse. Accordingly, claims 1-11 and 27-50 are been cancelled.

Previously withdrawn claims 13-24 will now be rejoined in view of their dependency from now allowed independent claim 12.

Information Disclosure Statement

The Information Disclosure Statement filed June 15, 2007 contained two non-patent literature entries that had no date. These entries cannot be considered in view of the lack of a publication date. Copies of the initialed IDS are enclosed with this Office action with those two entries lined-through.

Drawings

The drawings were received on June 15, 2007. These drawings are accepted.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: non-elected claims 1-11 and 27-50 are canceled as indicated above.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: applicant has amended the claims to recite the step of applying the high frequency voltage to an electrically conductive fluid sufficient to vaporize the fluid and the tissue in contact with the fluid. This is deemed to distinguish over the Edwards et al reference which requires the active and coil (i.e. return) electrodes be inserted directly into the tissue mass. While Edwards et al does disclose the use of a conductive fluid, there would be no reasonable way to expect the vaporization of the fluid to cause the vaporization of tissue since the electrodes are in intimate contact with tissue and do not afford a space to provide the tissue as in applicant's claimed method. Edwards et al fail to suggest a method of using the device in a procedure where the electrodes are not inserted directly into tissue.

It is noted that the examiner had indicated on the Interview Summary of June 22, 2007 that the claims in the instant application were device claims. This statement was in error as all pending claims are method claims.
